REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

Any combination of Hutel or Dankert fails to motivate one of ordinary skill to modify the combination of their teachings to include, in a process for preparing isobutyric acid anhydride, a step of adding a reactant not in excess while the reaction progresses and according to space volume free in the reactor by the distillation of the acetic acid produced by the reaction, until a desired overall molar ratio of the reactants is reached.

An updated search of the prior art failed to uncover a reference that either taught this step or motivated one of ordinary skill to modify a known process for producing isobutyric acid anhydride to include a step of adding a reactant not in excess while the reaction progresses and according to space volume free in the reactor by the distillation of the acetic acid produced by the reaction, until a desired overall molar ratio of the reactants is reached. Specifically, the examiner notes EP 0004641 which fails to suggest the indicated step.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
